

CCT College Dublin Continuous Assessment

Programme Title:	BSc in Computing & IT		
Delivery Mode:	Classroom		
Cohort Details:	Full-time, September 2023		
Module Title(s):	Professional Development		
Assessment Type:	Individual	Weighting(s):	10%
Assessment Title:	Skills Gap Analysis		
Lecturer(s):	Neil Doyle		
Issue Date:	21st September 2026		
Submission Deadline Date:	11th October 2026 @ 23:59		
Late Submission Penalty:	Late submissions will be accepted up to 5 calendar days after the deadline. All late submissions are subject to a penalty of 10% of the mark awarded . Submissions received more than 5 calendar days after the deadline above will not be accepted and a mark of 0% will be awarded.		
Method of Submission:	This assessment is submitted via Moodle.		
Instructions for Submission:	Please complete this assignment using the Skills Gap Analysis Excel template provided on Moodle.		
Feedback Method:	Results posted in Moodle gradebook		
Feedback Date:	2 - 3 weeks after late submission deadline.		

Description of Assessment Task

Students will have completed various self-assessment tools in class (e.g, Personality / Social Styles assessment, Emotional Intelligence test).

Using the learnings from these assessments, you must complete a **Skills Gap Analysis** for a role of your choice, and a **Personal Development Plan**. The plan must include SMART actions that you feel will help you bridge the gaps that you have identified between your current skills & experience, and the skills & experiences required for your desired role.

Skills Gap Analysis (10%)

Step 1 - Identify a current job vacancy that you would be interested in applying for upon completion of your Bsc in Computing & IT. You can find current job vacancies using;

www.irishjobs.ie

www.indeed.ie

<https://jobboardsearch.com/>

www.linkedin.com

Step 2 - Using Tab 1 of the [Skills Gap Analysis template](#), you must complete a detailed role profile for your chosen job, including a role description and a list of the technical and soft skills required for the role.

Step 3 - Using Tab 2 of the [Skills Gap Analysis template](#), you must complete a Skills Gap Analysis **specifically for the job you have identified in Step 1**. This involves detailing a list of your technical and soft skills and evaluating your current skills level against the skills required for the role.

Step 4 - For each skill, you should identify and document a plan to develop your competency level over the next 6 to 12 months. Ensure all plans for development are SMART (specific, measurable, achievable, relevant and time-bound)

Assessment Requirements

All assessment submissions must meet the following minimum requirements:

- Be submitted in the format outlined in the assessment summary table above ('Instructions for Submission').
- Be submitted by the deadline date specified or be subject to late submission penalties.
- Be submitted via Moodle upload
- Be the student's own work.
- Include the CCT assessment cover page.

Learning Outcomes:

This assessment addresses the following module learning outcomes for this module:

MLO 1 - Set achievable goals for career success (Continuing Professional Development)

MLO 2 - Self-appraise technical and transversal skills for the purpose of identifying strengths and weaknesses for skills planning development

MLO 3 - Critical evaluate further and higher educational programmes for the purpose of identifying and selecting suitable programmes of study for further success

Use of Artificial Intelligence

This assessment applies the AI Fluency Framework — four interconnected competencies for effective, efficient, ethical and safe AI use. Your engagement with AI will be reviewed across all four dimensions:

Delegation Setting goals and deciding whether, when and how to engage with AI.	Description Effectively describing goals to prompt useful AI behaviours and outputs.
Discernment Accurately assessing the usefulness of AI outputs and behaviours.	Diligence Taking responsibility for what we do with AI and how we do it.

AI tools may be used in this assessment. Your use of AI will be assessed across the four ‘D’ competencies of the AI Fluency Framework.

Please complete column four below and submit as part of your Assignment Cover Sheet. *(A completed example is provided on page 6)*

AI Declaration using the AI Fluency Framework

AI competence	Reflective prompts (to students)	Lecturer expectations	Student response
Delegation <i>Deciding whether & when to use AI</i>	Identify the specific tasks in this assessment where you chose to use AI, and explain your reasoning. Where did AI add value? Where did you decide not to use it, and why?	AI is permitted for brainstorming, finding information, drafting outlines, and checking grammar/style. These support your planning without replacing your own thinking. You must declare and demonstrate where you delegated to AI in your assignment cover sheet (AI Declaration section)	<i>[Student response]</i>
Description <i>How you prompted the AI</i>	Include the exact prompts you used in your appendix (recorded on the AI Tools declaration). Reflect on how you communicated your goals to the AI — did you need to iterate or refine your prompts to get useful output?	Include all evidence of prompting (e.g. links to AI chats/projects, screenshots, appendix format/location).	<i>[Student response]</i>
Discernment <i>Evaluating what the AI produced</i>	In your reflection (~100 words), critically evaluate the AI output: what did you accept, modify, or reject — and why? Assess accuracy, relevance, and quality. You are responsible for verifying all AI-generated content before submitting.	Not required	Not Required

AI competence	Reflective prompts (to students)	Lecturer expectations	Student response
Diligence <i>Responsibility for your AI use</i>	Declare all AI tools used and cite them here. Briefly outline (~100 words) how you considered data protection, copyright, and ethical responsibilities when choosing what to input into any AI system. Unauthorised use is subject to CCT disciplinary procedures.	Cite AI tool name and version used. Circa 100 words on ethical considerations to be included.	<i>[Student response]</i>

Adapted from the [AI Fluency Framework](#) (Dakan, Feller, Anthropic, 2025).

Exemplar — 2,000-word report assignment, Research Methods module

AI competence	Reflective prompts (to students)	Lecturer expectations (completed by lecturer)	Student response (worked example)
Delegation <i>Deciding whether & when to use AI</i>	Identify the specific tasks in this assignment where you chose to use AI, and explain your reasoning. Where did AI add value? Where did you decide not to use it, and why?	Permitted: brainstorming, refining research questions, drafting outlines, checking grammar/style — these support planning without replacing your own thinking. Not permitted: generating final analysis or conclusions, since this assignment assesses your own statistical interpretation skills. Declare AI use in the AI Tools declaration appendix.	I used AI to brainstorm possible research angles and to draft an outline for my literature review. I chose not to use AI for the data analysis section, as this was where the assignment assessed my own statistical interpretation skills.
Description <i>How you prompted the AI</i>	Include the exact prompts you used in your appendix (recorded on the AI Tools declaration). Reflect on how you communicated your goals to the AI — did you need to iterate or refine your prompts to get useful output?	Include screenshots or an exported chat link in Appendix B.	See Appendix B for the exported chat. I started with a broad question on supply chain sustainability trends, then refined it over three iterations to focus on SME adoption barriers in Ireland.
Discernment <i>Evaluating what the AI produced</i>	In your reflection (~100 words), critically evaluate the AI output: what did you accept, modify, or reject — and why? Assess accuracy, relevance, and quality. You are responsible for verifying all AI-generated content before submitting.	Reflection IS required for this assignment. Expected length: ~100 words. Focus on the accuracy of any statistics or claims the AI generated.	The AI suggested three sustainability frameworks, but one had a misattributed source, so I removed it. I also rejected a suggested EU adoption statistic that I could not verify. I kept the suggested structure for comparing barriers, as it matched the brief. AI was most useful for organising ideas rather than supplying facts, and I checked all data points against my own academic sources before including them.
Diligence <i>Responsibility for your AI use</i>	Declare all AI tools used and cite them here. Briefly outline (~100 words) how you considered data protection, copyright, and ethical responsibilities when choosing what to input into any AI system. Unauthorised use is subject to CCT disciplinary procedures.	Cite AI tool name and version used. ~100 words on ethical considerations expected.	Tool used: ChatGPT (GPT-4). I did not input any personal or third-party data, only general research questions. I avoided asking the AI to generate content from copyrighted case study material, and cross-checked all AI-suggested references against the original publications before citing them.

Grading Criteria

This grading rubric sets out the marking criteria for your assessment.

Criteria	Selection & Analysis of Target Job Role	Technical & Soft Skills	Self-Assessment of Current Competency	Identification & Prioritisation of Skills Gaps	Personal Development Actions
Weighting per criteria	10 marks	30 marks	20 marks	20 marks	20 marks
<i>Excellent (+70%)</i>	Selects a highly appropriate current job vacancy closely aligned to career aspirations. Provides a detailed and accurate understanding of the role, responsibilities and requirements	Produces a comprehensive and well-researched role profile clearly distinguishing technical and soft skills. Skills are highly relevant to the specific vacancy and supported by evidence from the job description and/or other credible sources.	Provides an honest, detailed and highly reflective assessment of current competency against each required skill. Competency levels are consistently realistic and appropriately justified using evidence from experience, education, projects or other relevant activities.	Clearly identifies and prioritises the most significant gaps between current capability and the requirements of the target role. Demonstrates excellent understanding of the implications of these gaps for employability and career readiness.	Develops highly relevant, practical and personalised actions for addressing identified gaps. Actions are clearly connected to individual skills gaps. Development plans are consistently Specific, Measurable, Achievable, Relevant and Time-bound.
<i>Very Good (60 - 69%)</i>	Appropriate job vacancy selected with a clear and detailed understanding of the role and requirements.	Detailed role profile containing a strong range of relevant technical and soft skills.	Provides a strong and generally realistic assessment of current competency with good evidence and justification.	Clearly identifies important skills gaps and demonstrates good understanding of their significance.	Development actions are relevant, practical and clearly linked to identified gaps. Most development actions are clearly SMART.
<i>Good (50 - 59%)</i>	Suitable vacancy selected and key requirements identified, although some aspects lack detail.	Identifies appropriate technical and soft skills, although some relevant requirements are missing or insufficiently explained.	Provides reasonable self-assessment, although some competency ratings appear unsupported or overly general.	Identifies relevant gaps but provides limited prioritisation or analysis of their importance.	Appropriate development activities are identified, although some lack specificity or clear connection to the skills gap. Development actions demonstrate several SMART characteristics but some elements are underdeveloped
<i>Acceptable (40 - 49%)</i>	Vacancy is identified but understanding of the role and requirements is limited or superficial.	Basic list of skills provided, with limited relevance, detail or distinction between technical and soft skills.	Basic self-assessment provided but limited reflection or evidence supporting competency levels.	Identifies some gaps but analysis is basic, unclear or incomplete.	Development actions are basic, generic or only partially connected to the identified gaps. Limited evidence of SMART planning;
<i>Fail (< 39%)</i>	No suitable vacancy identified or role requirements are missing or lacking in detail.	Role profile is incomplete, contains largely irrelevant skills or fails to distinguish the requirements of the role	Little or no meaningful self-assessment. Competency ratings are missing, unrealistic or unsupported.	Fails to identify meaningful skills gaps or demonstrates little understanding of the difference between current and required competencies.	Development actions are absent, unrealistic or unrelated to the identified skills gaps. Development plans are not SMART and lack meaningful timescales, measures or achievable actions.
